INTERNSHIPS AVAILIABLE AT IRC

Lisa Marciniak is the Volunteer Coordinator at the International Rescue Committee in Abilene, and writes “We know that you students are busy preparing for the start of school next week and hope that it is going well. As our collaboration with numerous ACU departments in the past has led to successful internships, we wanted to send an invitation to any students who may be interested in completing an internship this school year. We already have numerous interns scheduled to begin the school year with us; however we realize that for others they may decide this within the very first of the semester.

The International Rescue Committee responds to the world’s worst humanitarian crises and helps people to survive and rebuild their lives. Founded in 1933 at the request of Dr. Albert Einstein, the IRC offers lifesaving care and life-changing assistance to refugees forced to flee from war or disaster. At work today in over 40 countries and in 22 U.S. cities, the IRC restores safety, dignity and hope to millions who are uprooted and struggling to endure. The IRC leads the way from harm to home.

Our office is quite diverse and includes the following departments that may meet the needs of student interests: Immigration, Case Management, Health and Wellness Case Management, Employment, Individual Development Account, Volunteer, Resource Development, Donations and ESL/Civics. Thank you for your interest, and if you should have any questions please do not hesitate to ask.”

NEW ELECTIVE FOR CJ STUDENTS

Criminal Justice students have the opportunity to enroll (and three did!) this semester for the first time in IT 440 Advanced Security, taught by Rob Byrd in ACU's I-School.

The course examines the 10 interdependent knowledge domains of the Certified Information Systems Security Professional (CISSP) Common Body of Knowledge (CBK): Information Security and Risk Management, Security Architecture and Design, Telecommunications and Network Security, Operations Security, Cryptography, Physical Security, Software Development Security, Access Control, Business Continuity and Disaster Recovery, and Planning, Legal, Regulations, Compliance, and Investigation. The second part of the course consists of three two-week projects that students will individually select from a list or arrange with the instructor. Projects will range from specific research within a CISSP domain to security case studies to malware reverse engineering. Available during the course are cyber forensic on-site checklists and pamphlets, penetration testing toolkits, Wireshark tutorials, and other resources. Hopefully this course will continue to be offered on a regular basis for IT and CJ students.
