

Online
**Bachelor of Science in Information
Technology Administration**
Application Development Track
128 Credit Hours

Admission Requirements:

- All applicants must be out of high school for at least four years.
- \$50 application and processing fee.
- Official high school transcripts, and/or all colleges attended.
- ACT or SAT scores are NOT required.

Cost:

- Per Credit Hour - \$395.
- A \$300 resource fee will be administered per part of term.
- Total cost of degree program will vary depending on transfer credits.

Bachelor of Science in Information Technology Administration

Major Requirements:

COMPUTER SCIENCE

CS 115: Introduction to Programming Using Scripting

An introduction to computer programming using a scripting language such as Python or PHP, with an emphasis on problem solving and logic. Topics include: variables and constants, arithmetic operations, data input and output, Boolean logic, conditional and iterative program control structures, user-defined functions, simple algorithm design, and debugging strategies.

CS 116: Applied Programming Using Scripting

A deeper exploration of computer programming using a scripting language such as Python or PHP, with a greater emphasis on algorithm design. Topics include strings, arrays, and other advanced data types, reading and writing files, modules, exception handling, recursion, regular expressions, and complex algorithm design.

INFORMATION TECHNOLOGY

IT 220: Introduction to Databases and Database Management Systems

A survey of the logical and physical organization of data and their importance in computer processing. Introduces data models, relational database design, and associated ideas. Compares modern DBMS software. Examines data as a strategic organizational resource. Students develop the basic SQL scripting skills necessary to create tables, queries, forms, and reports. Provides initial training towards professional database certification.

IT 221: Fundamentals of Networking and Data Communications

A first course in data communications and networking. Topics include: IP networks and services, comparative network configurations and communications protocols, function and purpose of physical network components, resource sharing, client-server systems, administrative issues and tools, and industry standards. Provides initial training towards professional network certification. Laboratory graded and credited with course.

IT 225: Web Technologies

An introduction to the development of web pages used to display images, tables, forms, and frames. Topics include HTML, cascading style sheets, server- and client-side scripting, applets, and web databases and security. Also introduces Internet browsers, user computer configurations, standard protocols, XML compatibility, Dynamic HTML, and accessibility issues.

IT 310: Introduction to Computer and Information Security

A survey of the fundamental concepts of computer and information security, including policies and technologies used to achieve secure networks, systems, computing facilities, and information resources. Topics include common system vulnerabilities and threats; models and mechanisms for mandatory, discretionary, and role-based access controls; authentication technologies; ethical issues; and related ideas. Provides initial training towards professional database certification.

IT 320: Database Administration

A comprehensive presentation of the concepts and techniques of modern database administration. Topics include: system/software evaluation, selection, installation, operations, and maintenance; capacity planning and re-engineering; and utilities and tools for trouble-shooting, backup/ recovery, and performance monitoring/tuning. Discusses approaches and standards for organizing and managing the database resources, users, and technology of an enterprise.

IT 410 Systems Integration and Administration

Study and practice in the integration and administration of computer systems. Topics include: resource planning; hardware evaluation, acquisition, installation, and maintenance; file systems; system diagnostics and performance tuning; backup/ restore processes; integration of various operating platforms and open source technologies; and user and customer support services. Requires scripting and shell programming.

Bachelor of Science in Information Technology Administration

Major Requirements Cont'd:

INFORMATION TECHNOLOGY CONT'D

IT 490: Topics in Information Technology

Investigation of an Information Technology topic of current interest. Topics rotate depending on faculty expertise and student interest, with the same topic generally not being offered more than twice.

ITA 4XX: Systems Development Processes and Methodologies

Traditional and Agile processes and methodologies. Overviews traditional system and product life cycle models, requirements gathering, analysis and design strategies, and the Agile philosophy, vocabulary, tools and best practices.

INFORMATION, TECHNOLOGY, AND COMPUTING

ITC 110: Introduction to Information, Technology, and Computing

An introduction to the mindsets, concepts, and skills found in the disciplines of the School of Information, Technology, and Computing.

ITC 460: Managing Technical Projects

Students apply knowledge in their major area and develop project management skills through oral and written analysis of cases and applied projects. Prerequisite: Course must be taken during the last year of the academic program. A capstone and writing-intensive course.

MATHEMATICS

MATH 131: Calculus for Application

Introduction to differential and integral calculus of algebraic, exponential, and logarithmic functions. Emphasis on applications.

MATH: 377: Statistical Methods I

Measurement concepts and scales, populations versus samples, descriptive statistics, random variables and their properties, sampling processes and distributions, special probability distributions, confidence intervals on means and variances from samples, hypothesis tests, one-way analysis of variance, linear correlation and regression,

estimation of proportions, and introduction to contingency tables.

Application Development Track Options:

CS 330: Human-Computer Interaction

Introduction to both the programmatic and psychological considerations surrounding shaping the computer tool to the user. The course will cover the details of implementing a graphical user interface, and how to make the interface as user-friendly as possible.

IT 325: Web Application Development

Continuation of Web Development I. Topics include: Rapid Application Development; client- and server-side scripting for user and database interaction; session/cookie management; and privacy and integrity issues. Students learn scripting languages such as JavaScript, Perl, and ASP and develop an understanding of the document object model. Emphasizes satisfying client specifications.

ITA 3XX: Mobile Application Development for Information Technology

Students develop applications for mobile computing devices. Includes theory, concepts, and hands-on programming. Assumes a strong background.

ELECTIVES

24 hours of electives.

General Education/University Requirements:

56 hours of general education and university requirements are needed to fulfill this degree. Specific courses will be determined based on a student's incoming transfer credits.

Cybersecurity Track Options:

IT 415: Networks and Security Administration

Study and practice in administering and securing a multifaceted network and communications infrastructure. Topics include: network standards, protocols, naming systems, configurations, and services; hardware and operating system interoperability; capacity planning and re-engineering; security requirements and procedures; logging and auditing tools; disaster planning; and trouble-shooting and performance tuning. Emphasizes user and client needs.

IT 473: Cybersecurity Policies, Standards, and Compliance

A practical survey of cybersecurity policy, standards, and compliance issues. Projects and team projects reinforce learning. Students perform risk assessments and create cyber policies.

ITA 4XX: Risk and Incident Planning and Response

Applies policies, standards, and guidelines in the design and development of Risk Management Plans and Incident Response Plans.
